

# GAM run 03-33\_cm clarification memo

by Shirley Wade

Texas Water Development Board  
Groundwater Availability Modeling Section  
(512) 463-7847  
March 18, 2004

## DESCRIPTION OF ORIGINAL REQUEST:

Neches and Trinity Valleys Groundwater Conservation District requested recharge values from the Groundwater Availability Model of the northern part of the Carrizo-Wilcox aquifer (Fryar and others, 2003). The values were extracted and presented in GAM Run Report 03-33 on November 21, 2003.

## CLARIFICATION:

It should be noted that the recharge values listed in Table 1 of GAM Run Report 03-33 are for the Carrizo-Wilcox aquifers only. The Queen City and Sparta aquifers also outcrop in Henderson, Anderson, and Cherokee counties and would contribute additional recharge to these counties. A groundwater availability model is currently under development for the Queen City and Sparta aquifers and is expected to be completed by November 1, 2004.
