RECORDS OF WATER-LEVEL MEASUREMENTS IN CROCKETT, GLASSCOCK, REAGAN,
UPTON, AND TERRELL COUNTIES, TEXAS, 1937 THROUGH 1957

Compiled by
Frank A. Rayner, Geological Engineer
Texas Board of Water Engineers

March 1959

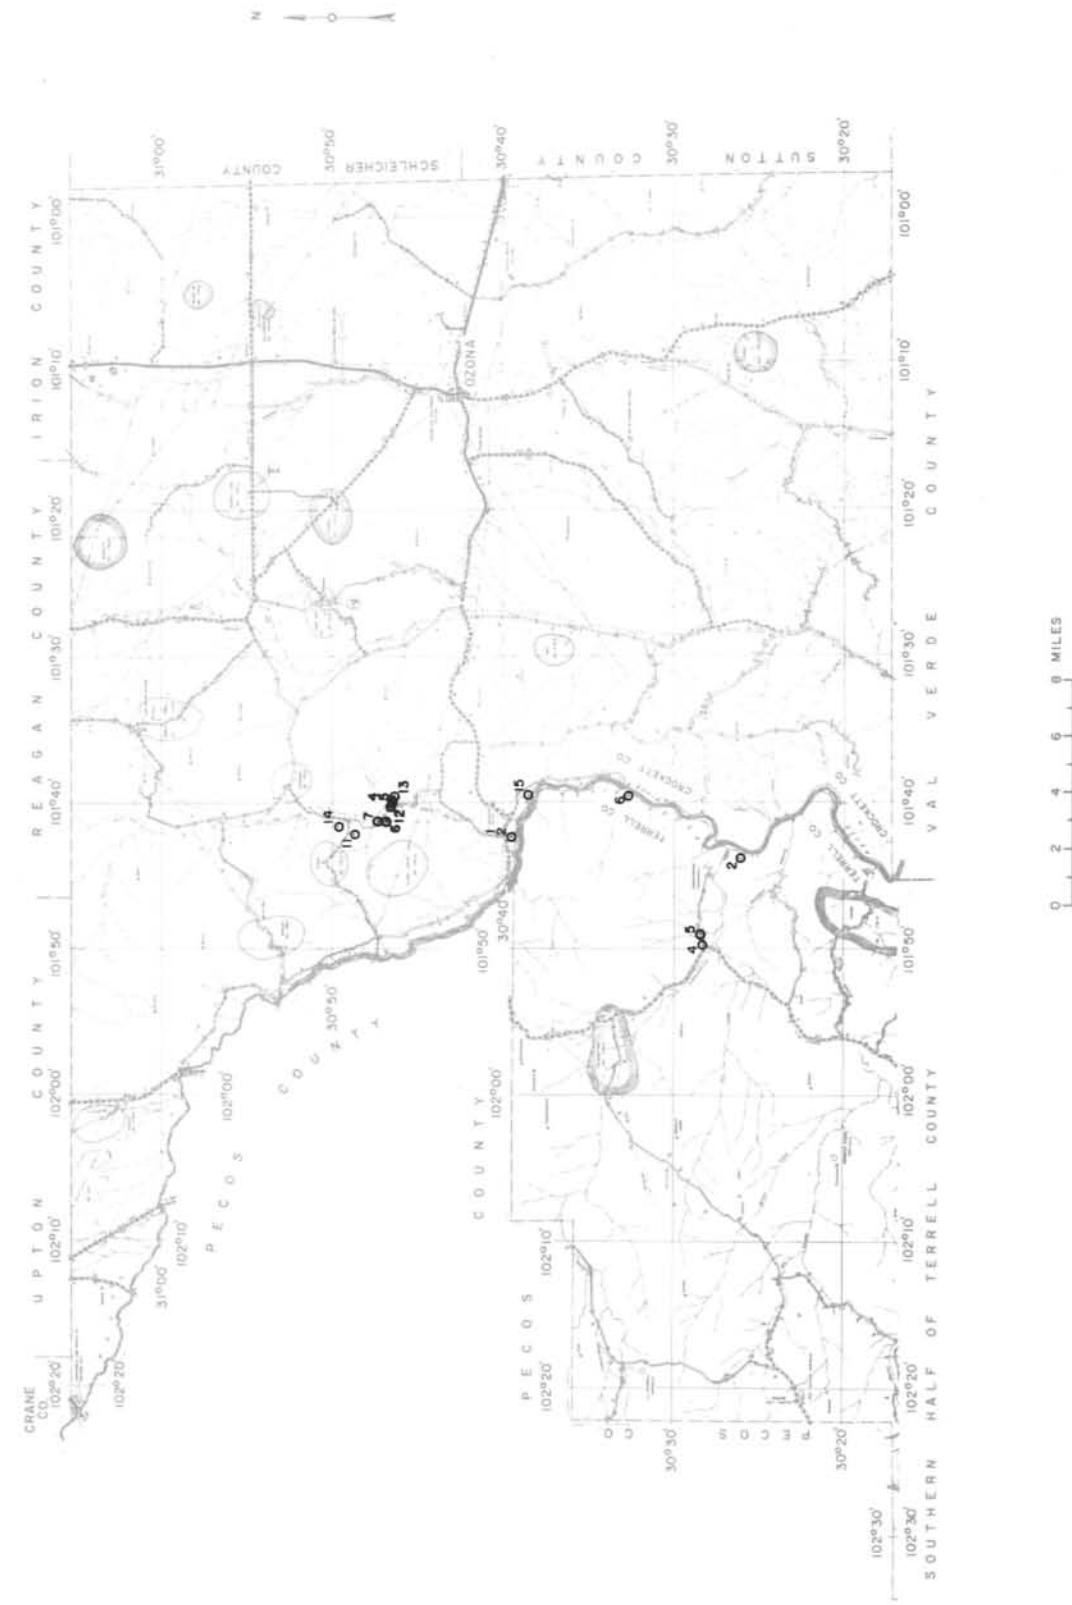

INTRODUCTION

The Texas Board of Water Engineers is charged with making, independently or in cooperation with other State and Federal agencies, scientific investigations of the source, amount, and quality of ground-water supplies. To evaluate effects of ground-water development in relation to available supply, periodic measurements of water levels are made in principal reservoirs of the State through an observation well program conducted cooperatively by the Texas Board of Water Engineers and the United States Geological Survey.

This bulletin contains measurements of the depth to water in feet below land-surface datum in 11 wells in Crockett County, 16 wells in Glasscock County, 11 wells in Reagan County, 4 wells in Terrell County, and 3 wells in Upton County. The composite period of record covers measurements made in observation wells from 1937 through 1957.

Observation well location maps precede the corresponding table of water-level measurements for each county. Hydrographs of water-level fluctuations in selected wells in Crockett, Glasscock, and Reagan Counties follow their associated table of water-level measurements. Annual precipitation charts for Ozona and Garden City are combined with their respective hydrographs.
