RESERVOIR STORAGE

June 2008

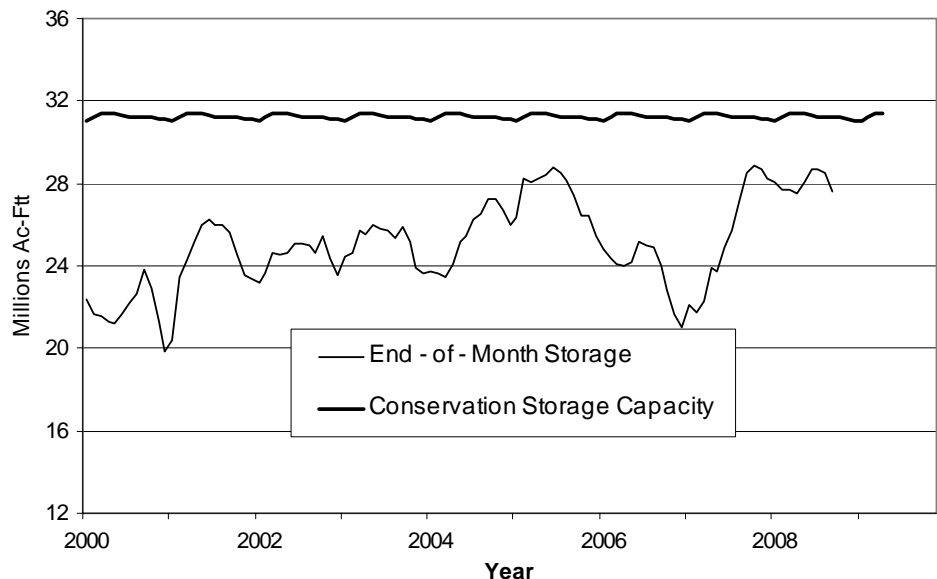

Near the end of June, the 109 reservoirs monitored for this report were 88* percent full, on average, holding 27.64 million acre-feet in conservation storage.

Storage was at 100% in 12 reservoirs. Two regions, East (97%) and North Central Regions (96%) had storage at or above 90% of capacity; however, the High Plains Region (6%) and the Trans-Pecos Region (27%) remain very low. Lake Meredith, the largest reservoir in the High Plains Region, is holding less than 3% of its conservation capacity.

Regionally, storage decreased in all nine regions. Compared to this time last year, storage decreased in eight of nine regions. State total storage went down 0.88 million acre-feet during the month and 0.84 million acre-feet over the past 12 months.

* Only the Texas share of storage in border reservoirs is counted.

CONSERVATION STORAGE DATA FOR SELECTED MAJOR TEXAS RESERVOIRS

Figures are based on end of the month data at 109 major reservoirs that represent 95 percent of the total conservation storage capacity of the 175 major water supply reservoirs in Texas. By definition, a major reservoir has a conservation storage capacity of 5,000 acre-feet or greater.

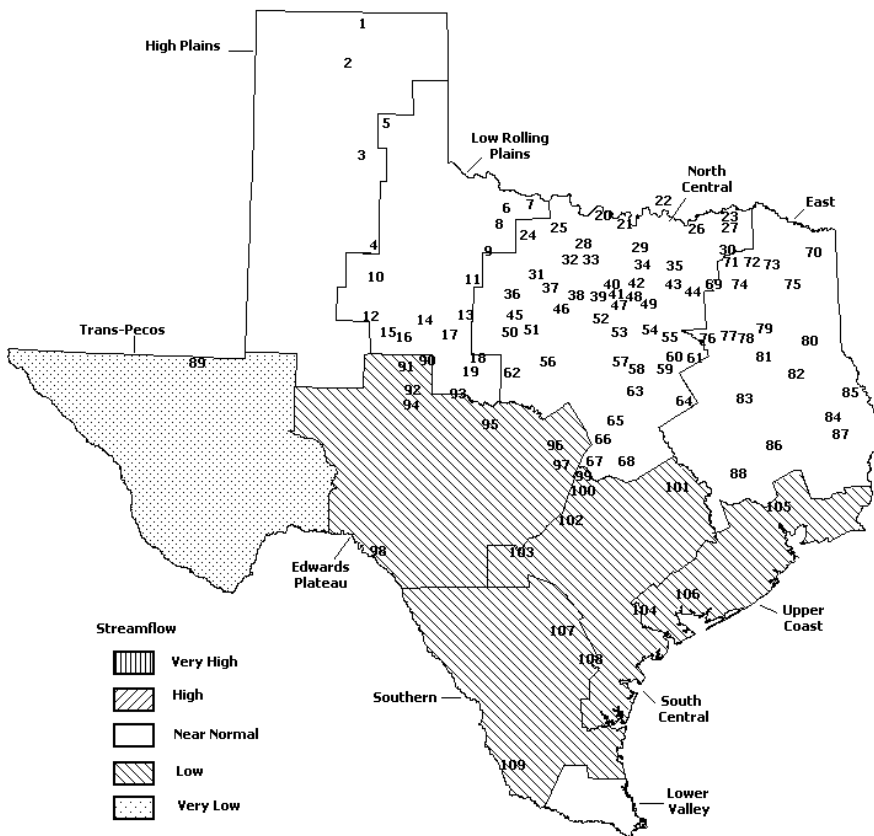

STREAMFLOW

Of 29 reporting index stations in June, computed 30-day mean flows were very high (<5%) at 1 station, high (5% - 30%) at 2 stations, low (70% - 95%) at 12 stations, very low (>95%) at 2 stations, and near normal (30% - 70%) at the remaining 12 stations. Compared to May, flows increased at only 5 index stations, but decreased at 23 stations.

On a regional basis, flows in June were very low in the Trans-Pecos Region, low in Edwards Plateau, South Central, Upper Coast, and Southern Regions, and normal in all other regions. Streamflow in the Lower Valley Region is not monitored.

* Conservation volume is used as conservation storage capacity because the dead storage is unknown.

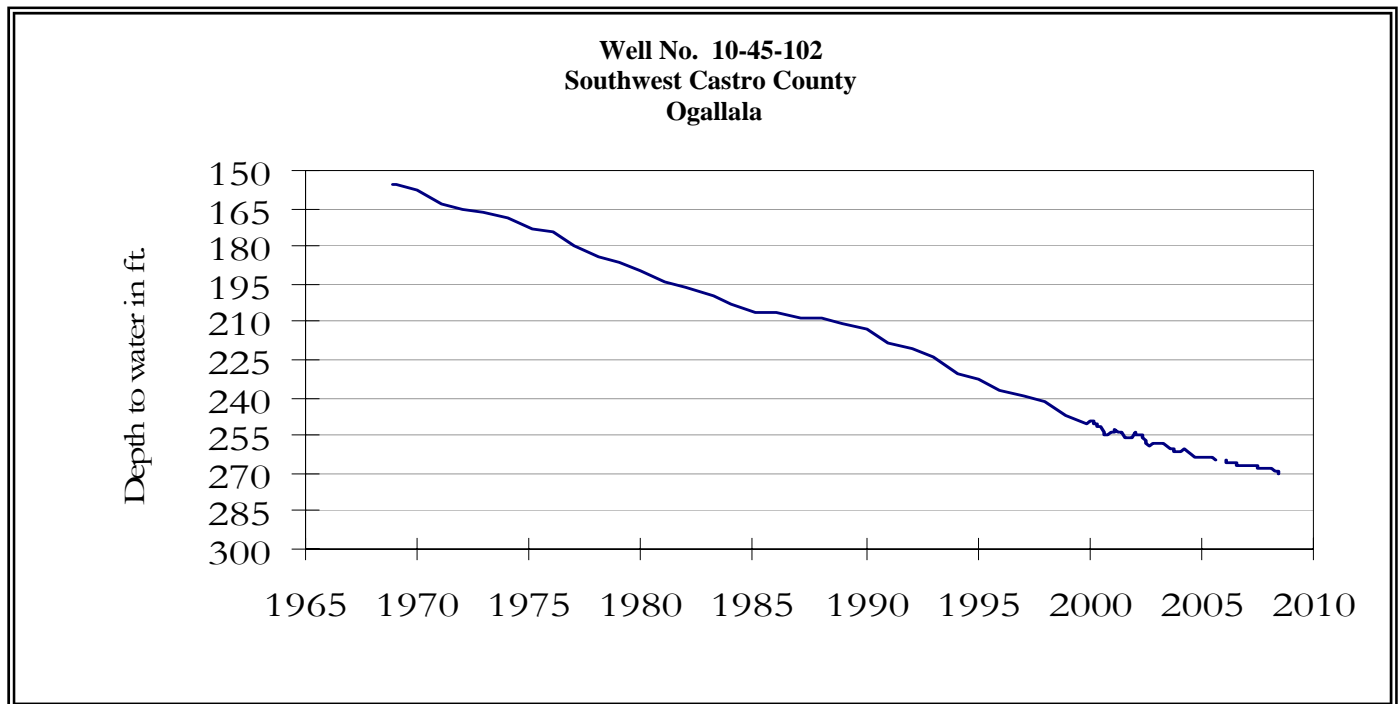

Note

Conservation storage capacity is the space available to store water above the lowest outlet and below the top of conservation pool, or normal maximum operating level. Conservation storage refers to the volume of water held within the conservation storage space. Not included is any water in flood control storage (above the top of conservation pool or normal maximum operating level), or any water in the dead storage. Conservation storage percentage is based on the conservation storage capacity of the reservoir and the conservation storage in the reservoir on date shown. Percent change is given by $100 \times (\text{current conservation storage} - \text{past conservation storage}) / \text{conservation storage capacity}$. Figures shown are for the Texas share of conservation storage in all reservoirs.

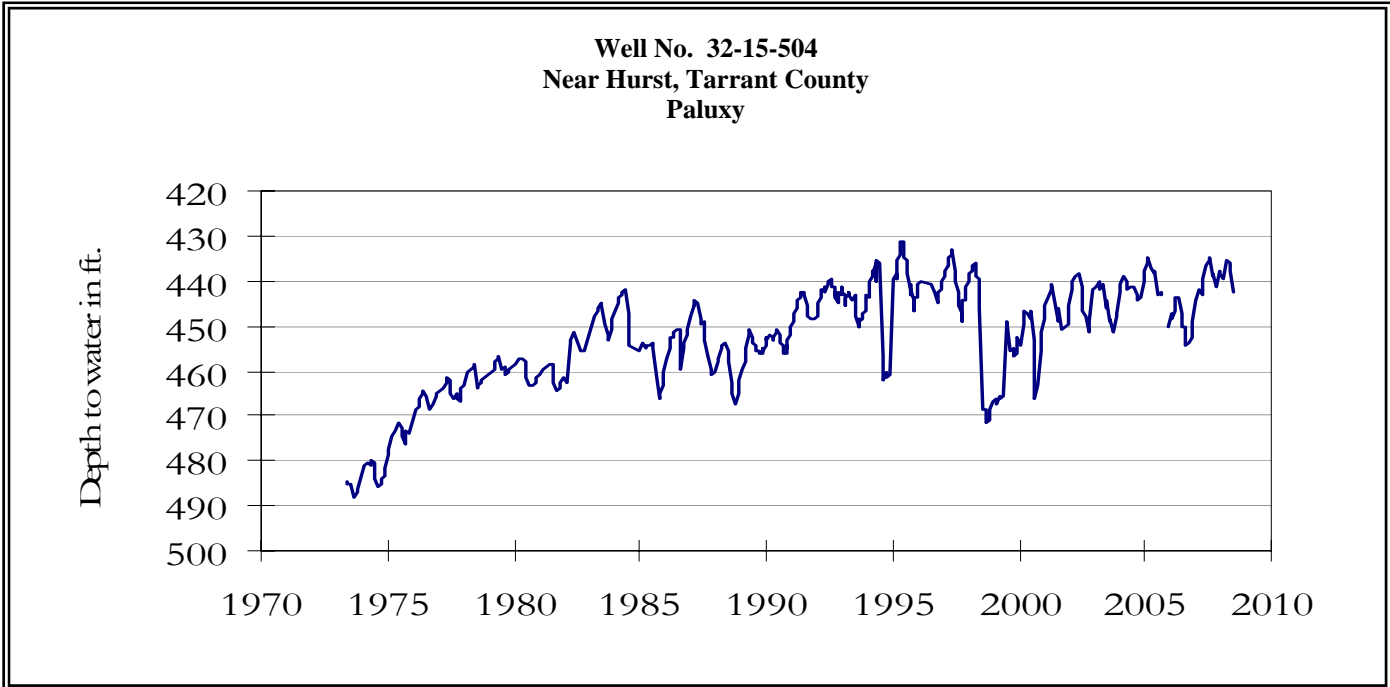

GROUND WATER LEVELS IN OBSERVATION WELLS

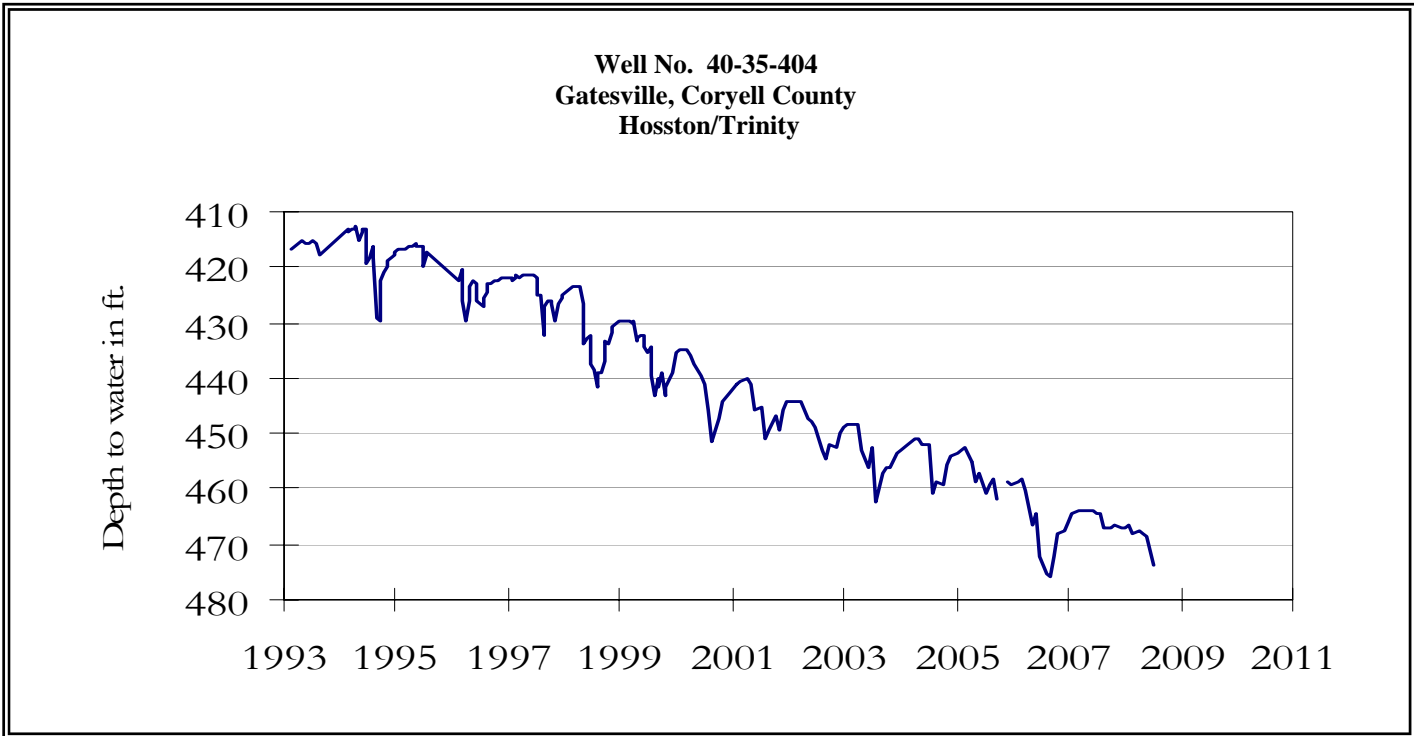

JUNE GROUND WATER LEVELS IN OBSERVATION WELLS

The late June water-level measurement in this Ogallala Aquifer well, elevation 3,816 feet above sea level, was 270.26 feet below land surface. This measurement was 1.35 feet below last month's measurement, 2.92 feet below last year's measurement, and 114.26 feet below the initial measurement recorded in 1968. No water level measurements were recorded for September through December 2005.

The late June water-level measurement in this Paluxy Formation Trinity Aquifer well, elevation 535 feet above sea level, was 442.63 feet below land surface. This measurement was 4.96 feet below last month's measurement, 7.13 feet below last year's measurement, and 64.63 feet below the initial measurement recorded in 1953. No water level measurements were recorded for September or October 2005.

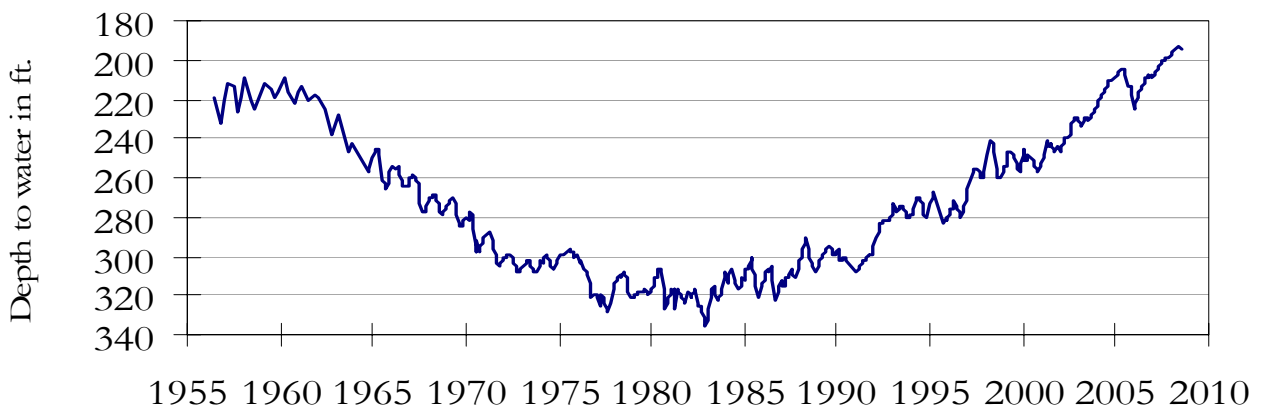

The late June water-level measurement in this Hosston Formation Trinity Aquifer well, elevation 823 feet above sea level, was 474.00 feet below land surface. This water level was 5.50 feet below last month's measurement, 9.78 feet below last year's measurement, and 182.00 feet below the initial measurement recorded in 1955. No water level measurement was recorded for October 2005.

El Paso, El Paso County
Bolson Deposits**

The late June water-level measurement in this Hueco Bolson Aquifer well, elevation 3,882 feet above sea level, was 291.00 feet below land surface. This water level was 2.06 feet below last month's measurement, and 59.10 feet below the initial measurement in 1964. No water level measurements were recorded for May through July 2007, and October or December 2005.

**Well No. 65-14-409
Alief, Harris County
Evangeline**

The late June water-level measurement in this Evangeline Formation Gulf Coast Aquifer well, elevation 66 feet above sea level, was 194.39 feet below land surface. This was 0.98 feet below last month's measurement, 6.53 feet above last year's measurement, and 58.89 feet below the initial measurement recorded in 1947.

**Well No. 68-37-203 (J-17)
In San Antonio, Bexar County
Edwards and Associated Limestones**

The late June water-level measurement in this Edwards (BFZ) Aquifer well, elevation 731 feet above sea level, was 73.20 feet below land surface. This was 12.80 feet below last month's measurement, 23.10 feet below last year's measurement, and 26.56 feet below the initial measurement recorded in 1962.

***** Water levels below the red line indicate Edwards Aquifer Authority Stage 1 drought restrictions. *****

**Well No. 68-60-912
Between Poteet and Pleasanton, Atascosa County
Carrizo**

The TWDB has taken this recorder offline and is in the process of installing a new recorder in Atascosa County.

HYDROGRAPH OF THE MONTH

Each month this space features a new hydrograph (marked with the • symbol on the map) depicting different aquifers and different conditions in Texas.

Well No 59-24-702 Grimes County

This water level observation well, located 13 miles north of Anderson, at an elevation of 260 feet ASL, was completed in the Yegua Jackson Aquifer. The aquifer is mainly used for domestic and livestock purposes and no significant water level declines have occurred.

June, 2008

Water level measurements were available for six out of the seven key monitoring wells. Water levels declined at all reporting monitoring wells, ranging from 0.98 feet in the Harris Co. Gulf Coast well to 12.80 feet in the Bexar Co. Edwards well. The J-17 well in San Antonio recorded a water level of 73.20 feet below land surface, 12.80 feet below last month's measurement. This water level is 2.2 feet below the Stage 1 critical management level. The Edwards Aquifer Authority declared Stage 1 drought restrictions for the San Antonio segment of the Edwards Aquifer on June 23.
